Because the world is beautiful.

There's nothing more beautiful than the natural world and nowhere more special than the part of it that you call home. When you connect to the beautiful world outside, you live better, every day. By bringing light, air and views inside, you can enjoy all that nature has to offer.

At Centor®, we believe you should have the beauty of the outdoors in your home and the control you need for maximum comfort and enjoyment. We want you to be able to create true inside-outside living, without any compromises.

Setting new standards for over 65 years

Founded by German engineer Frank Spork, Centor was first formed in Brisbane, Australia in 1951.

Now a third-generation family business, Centor has forged a reputation for designing and manufacturing the industry's leading window and door systems.

In 1998, Centor designed and patented hardware for the modern folding door that enabled them to be used as exterior openings for the first time. These doors allowed architects to design homes which could connect people to the world outside.

Following the success of its folding door technology, Centor delivered another world-first – a retractable insect screen that could be used on large door openings and operated with the touch of a fingertip.

In 2013, Centor launched the award-winning Integrated Door – the first patio doors to have concealed hardware and built-in insect screens and blinds.

Today, Centor manufactures products in 4 global locations and sells into many more, enabling homeowners around the world to enjoy inside-outside living when their local weather allows.

Frank Spork, Centor Founder

The finishing touch for your doors and windows

Whether you are renovating or building, creating a seamless inside-outside living experience is important in any modern home.

By including large doors and windows in your home you connect with the outside – bringing fresh air and sunlight into spaces. However, these openings also create issues with insects, privacy, and glare.

Add the finishing touch to your home with Centor's range of stand-alone insect screens and blinds. Our unobtrusive designs can be paired with many different styles of doors and windows, and fitted to a new or existing opening.

You can specify Centor Screens in a wide range of size, colour, and material options. Our systems are then made-to-order using the finest quality supplies and craftsmanship.

Backed by over 65 years of engineering excellence, Centor's screening systems glide with smooth, fingertip operation and are easily accessible when needed while remaining hidden when not.

S2 System

Perfect for smaller openings, Centor's S2 Screen enables you to enjoy fresh air, breezes and uninterrupted views in your home at any time of day without any disturbance from insects.

Simple to use

Operating with just a fingertip, Centor's unique load balancing technology allows the screen to glide smoothly across the whole door opening to effortlessly stop at any desired position.

Considered design

The S2 Screen has been designed to complement all new and existing doors and windows in renovations, extension projects and new construction. The compact frame design ensures it can be paired neatly on the inside or outside of the opening.

When not in use, the screen retracts horizontally into its frame, leaving nothing to disrupt the view and protecting it from damage, dust and dirt.

Installing a flyscreen means that doors can be open more often, increasing ventilation throughout your home. Should the screen mesh blow out of the top or bottom track, it will feed back smoothly onto the roll the next time it is retracted.

Configurations

The S2 Screen is available in two screen configurations:

Single: a single screen that extends from one side of the frame and covers the full width of the opening.

Double: two screens meeting in the middle of the opening.

To see the full range of specifications for the S2 Screen, visit centor.com.

Narrow screen jamb

Low-profile sill

S4 System

Simple to use

Operating with just a fingertip, Centor's unique load balancing technology allows screens and blinds to glide smoothly across the whole door opening to effortlessly stop at any desired position.

Considered design

The S4 Screen and Blind complements large sliding and folding doors. It can be fitted to the inside or outside of the opening so you can maximise inside-outside living to its full potential.

The screen and blind are fully retained within the frame on all sides to allow control of insects, sunlight and privacy. They retract discreetly into the frame when not in use, removing visual distractions to the view outside whilst also protecting them from damage, dust or dirt.

The addition of both top and bottom tab tracks on the fabric ensure blinds are held snugly in the frame and insect screens remain securely in place - even in a breeze.

The screen mechanism is easily accessible through the removable covers to make cleaning and servicing simple and ensure the continuous performance of your screen for years to come.

Configurations

With three options to choose between, there's a configuration to suit your home:

Single: a single screen or blind that extends from one side of the frame and covers the full width of the opening.

Combination: a combination of two fabric types, with one housed in each side of the frame, such as a screen from the left and a blind from the right.

Double: two screens or blinds (in the same fabric option), which meet along the opening.

S4 Corner System

Expansive views

Open more of your home to the outside with the Centor S4 Corner System. Designed with the same clean lines as our S4 System, homeowners will enjoy even more fresh air and expansive views with new or existing post-less corner doors.

Considered design

The S4 Screen and Blind complements large post-less sliding and folding doors. It can be fitted to an internal or external corner door so you can maximise inside-outside living to its full potential.

The screen and blind are fully retained within the frame on all sides to allow control of insects, sunlight and privacy. This is especially important for an opening that has the effect of bringing in light and wind from multiple directions.

The addition of both top and bottom tab tracks on the fabric ensure blinds are held snugly in the frame and insect screens remain securely in place - even in a breeze.

The screen mechanism is easily accessible through the removable covers to make cleaning and servicing simple and ensure the continuous performance of your screen for years to come.

Configuration

Cornerless: two screens or blinds (in the same fabric option) meet at a 90 degree angle opening. It is available for a corner door facing your home or facing your beautiful world outside.

Centor S5 screen and blind for timber windows

Designed to complement timber windows, the Centor S5 is a cord-operated system for insect screens or blinds. The S5 Screen can be paired alongside many window styles.

Simply rolled away when not needed, the screen is perfect for use on a window with a servery to an outdoor entertaining area. And unlike sliding screens, the retractable S5 makes cleaning windows easy. With blackout fabric options available, the blind is a great addition to any bedroom.

S5 is complete with durable timber cladding which adds warmth and luxury to your home. To see the full range of specifications for the S5 Screen, visit centor.com.

Solid timber frame

Centor S6 screen and blind for aluminium windows

The Centor S6 is an aluminium system for insect screens or blinds. It can be paired with many types of windows, including sliding and louvre.

The unobtrusive chain-operated system is simply rolled away when not needed, keeping views to outside clear and allowing windows to be easily cleaned.

Nest two S6 Screens together to create a duo system – try insect mesh in one and a blackout blind in the other to keep insects out of your home, and enjoy uninterrupted sleep.

Constructed from durable aluminium, S6 can be powder-coated in any colour of your choice to suit your home. To see the full range of specifications for the S6 Screen, visit centor.com.

Slim aluminium frame allows for face mounting to window

Finishing options

You can specify Centor Screens in a wide range of size, colour, and material options.

Insect screen

Enjoy fresh air without the worry of insects. The durable insect mesh used for all Centor Screens has no pleats or lines to detract from the view and is available in a choice of weave to suit your needs.

Blind

To stop glare and provide privacy, light-filtering and blackout blinds are available in a choice of stylish patterns and a range of colours to suit every home.*

Both the mesh and fabric in Centor screening systems can be replaced and updated whenever the mood takes you. Replacement screens can be ordered by your Centor Screen Dealer.

Frame finishes

All Centor screening systems are constructed from durable aluminium. S2, S4 and S6 can be powder-coated in any colour of your choice, whilst S4 also has the additional option of a wood veneer to add warmth and luxury to your home. S5 comes fully clad in solid timber.

Frame sizes

Every S2 and S4 screening system is made-to-order to your exact size specification. S5 and S6 are available in standard size kits which can be cut to size by your local Centor Screen Dealer.

To see the full range of material options and overall frame sizes for Centor Screens, visit centor.com.
