DynaSet™ Drop-In Anchors

Description

The DynaSet™ Drop-In Anchor is an all steel, medium duty, displacement setting, expansion anchor designed to provide a permanent anchorage point in concrete. Its internal thread allows it to be used with both machine bolts and threaded rod, placing no restrictions on fixture thickness. The DynaSet™ requires the use of the correct setting tool to ensure full expansion of the anchor body. The setting tool also acts as visual check for correct setting of the anchor.

Specification

Makadal	O Ot Ot Ot Ot Ot O (A A)
Material	Carbon Steel, Stainless Steel 316 (A4)
Corrosion Protection	Zinc Plating
Head Style	-
Fixing Method	Fixture Aligned
Setting Method	Displacement
Anchoring Method	Expansion
Thread Sizes	M6, M8, M10, M12, M16, M20
Drilled Hole Diameters	8mm, 10mm, 12mm, 15mm, 16mm, 20mm, 25mm
Anchor Lengths	25mm, 30mm, 40mm, 50mm, 60mm,
	65mm, 80mm
Maximum Fixture Thickness	' -
Indicative Working	Max Tensile 2.5kN -15.8kN
Loads in 32MPa Concrete*	Max Shear 2.2kN - 13.1kN
Substrates	Concrete

^{*} Refer to load table

Features & Benefits

- The Dyna Set[™] fits flush with, or just below, the surface of the substrate, leaving no protrusions when not in use and allowing for easy patch work.
- The anchor's internal thread facilitates the use of machine bolts and threaded studs of any length, removing restrictions on fixture thickness.
- The DynaSet[™] requires only shallow embedment, which reduces the risk of drilling into rebar.
- The setting tool provides a visual expansion check for correct setting of the anchor
- The flanged version (zinc plated only) has a retaining lip to keep the anchor flush with the surface of the substrate. This also allows for consistent threaded rod drop lengths.

Installation

- 1. Drill or core a hole to the recommended diameter and depth. Clean the hole thoroughly with a hole cleaning brush. Remove the debris with a hand pump, compressed air, or vacuum.
- 2. Insert the anchor into the hole. Using a hammer and the appropriate setting tool, drive the expansion plug into the anchor until the shoulder of the tool rests against the surface of the anchor.
- 3. Position the fixture, insert the bolt or threaded rod and tighten with a spanner.

Note: When installed in accordance with Ramset™ specifications, anchor performance is fully compliant with AS/NZS1891.4:2000 "Industrial fall-arrest systems and devices"

Installation

- 1. Drill or core a Ø 15mm hole to depth of 130mm± 2.5mm. Clean the hole thorougly with a hole cleaning brush. Remove the debris with a hand pump, compressed air, or vacuum.
- 2. Check depth is correct, using the reverse end of the setting tool (SETSA4). The depth indicator groove MUST be level with the concrete surface.
- 3. Insert the DSM12SS into the hole by knocking it in, using the reverse end of the setting tool.
- 4. Using a hammer and the setting tool, drive

- 5. Insert safety ring anchor and rubber seal. Tighten with a bar to the following Tightening Specification:
 - a. Using a bar not more than 100mm long (the bar should not bend during installation).
 - b. Using a 150mm long bar, not more than 10mm in diameter and of yield strength not exceeding 300MPa. R10 reinforcement bar is suitable for this purpose. When the bar starts to bend, the anchor ring should be returned back to the closest vertical orientation. Ensure the anchor ring is left in a vertical position. The DynaSet[™] will remain in position if the safety ring anchor is removed.
