Timber is a natural product, and it will react to changes in the environment during the life of the product. Every effort is made during manufacture to minimise the effect of these changes may have on the final appearance of the product, however swelling, staining and resin/tannin bleed are natural characteristics and may occur as a result of changes to climatic conditions. To minimise the opportunity for these changes to impact on the finished product we recommend the following steps be undertaken when storing, handling, and installing these products.

- Timber should be kept dry – store at least 150mm off the ground and evenly supported in a well ventilated undercover area. Protect the product from all sources of moisture, (including ground moisture), humidity, and weather until installed.
- Once installed ensure that the timber is coated with a quality oil based finish, being sure to follow the manufacturer's instructions.
- Ensure that you keep to a regular maintenance program to care for your timber.

Simmonds Select Meranti

Meranti comprises a large number of timber species sourced from Malaysia, Indonesia, Thailand, and the Philippines. Simmonds Select Meranti is 100% sourced from Malaysia, we take great care in sourcing our timber from responsible sustainable suppliers, each with accreditation under the MTCC, which carries with it PEFC endorsement. All our Meranti comes into Australia fully immunised to treatment level H1 to ensure protection from the Lyctid Borer.

Convenience of supply is the hallmark of our Meranti offer to the market, allowing the timber merchant to purchase the product as full packs (random lengths), job lots (random lengths), or in set length pieces (subject to availability at the time of order). Simmonds Select Meranti – For a natural timber finish.
